Matrox Graphics Partners with BOSaNOVA for Multi-Display Thin-Computing Solutions

BOSaNOVA XTC-1300 Thin Client with integrated Matrox EpicA hardware and software supports up to four monitors

Montreal, Canada, July 10, 2007 — Matrox Graphics, the leading manufacturer of graphics solutions for professionals, today announced integration of its [Matrox EpicA](#) multi-display hardware and software suite for thin computing with the BOSaNOVA [XTC-1300](#) Thin Client. By integrating Matrox EpicA with BOSaNOVA's XTC-1300 – their most powerful thin client to date – users will have the ability to connect up to four monitors to a single system. Increased screen real estate means users can keep more information visible at once and avoid the need to toggle between applications, thereby reducing errors and increasing their productivity.

“Matrox is pleased that BOSaNOVA has chosen to integrate EpicA into their product line-up,” says Mohamed Jivraj, product manager, Matrox Graphics. “EpicA’s multi-display video capabilities and remote desktop management controls will be invaluable to BOSaNOVA users seeking a multi-display thin-computing environment that feels similar to working locally with multiple displays.”

Matrox EpicA hardware includes dual ([EpicA TC2](#) and [EpicA TC2-Lite](#)) and quad ([EpicA TC4](#)) multi-display graphics cards, which feature low power consumption, support for high-resolution digital or analog displays and support for Pivot mode*. The EpicA software suite, installed on the server side, includes [Matrox PowerDesk EpicA](#), which enables multi-display awareness for remote desktops, and [Matrox PowerSpace EpicA](#), which allows for multi-display virtual workspace capabilities. Matrox EpicA supports RDP version 6.0, RDP version 5.2, Citrix ICA client 9.x, and Presentation Server 4.0 on Windows platforms, and Linux ICA client 9.x and rdesktop 1.4.1 on Linux platforms.

“Integrating Matrox EpicA with the XTC-1300 allows thin-client users to display large amounts of information at higher resolutions across multiple monitors,” says Martin Pladgeman, BOSaNOVA President. “Matrox’s reputation, expertise in multi-display products, and commitment to quality make this partnership an obvious fit.”

BOSaNOVA XTC-1300 Thin Clients are available with a 1.3 GHz processor, an 802.11 b/g internal wireless option and built in PCI and PCMCIA slots for additional flexibility. Additionally, the XTC-1300 boasts the 8X AGP Graphics Accelerator, one of the fastest graphics processors available in a thin client.

Availability
