## **Matrox Named to Prestigious Military Training Technology Top 100 List** Innovations in Graphics Hardware Bring Multi-display Capabilities to Military Applications

**Montreal, Canada, September 25, 2007** — Matrox Graphics Inc., the leading manufacturer of multi-display graphics solutions for professionals, is pleased to announce that it has been named to Military Training Technology (MT2) Magazine's 2007 Top 100 list, a listing of companies compiled by MT2 that have made a significant impact in the military training industry throughout this year.

MT2 approached more than 600 candidates and also invited any company who felt that it was deserving of the distinction to apply for the award. Companies were then selected based on various criteria including end-user feedback, innovations and need for the solution within the military training industry.

Recognition for the contribution Matrox has made to the military training industry was awarded based on the Matrox Graphics eXpansion Modules (GXM) series of external graphics hardware.

This series includes DualHead2Go Digital Edition and TripleHead2Go Digital Edition. GXMs are external boxes that connect via the dual-link DVI or analog output of a workstation, desktop computer or notebook and can support both analog and digital monitors. Ideal for simulation and training platforms, these versatile products provide a completely new way to add multi-display support to a workstation, desktop computer or notebook. GXMs do not require opening a computer, inserting parts into it, or replacing any hardware and software. They are ideal solutions for simulation and training platforms requiring the synchronization of two or three displays.

Matrox Graphics eXpansion Modules round out the comprehensive line of Matrox highly scalable COTS, multi-display add-in graphics cards and external graphics solutions.

The complete MT2 Top 100 list is available online at: <http://www.military-training-technology.com/article.cfm?DocID=2157>.

### **About Military Training Technology**

Military Training Technology is dedicated completely to military training as a critical component of command readiness and service transformation. Each issue is planned around specific leaders in important commands who function at the point of the spear. Emphasis is placed on technological developments that often move forward with breath-taking speed. Articles are often themed to the challenges and achievements of specific training units around the world. The use of technology is explained in easy-to-understand terms; readers will not be bogged down in the complexity of a difficult subject. The magazine readership includes Pentagon leadership, the Congress, all major service training commands, NATO, Washington D.C.'s Embassy community as well as industry executives.

**About Matrox Graphics Inc.**

Matrox Graphics Inc. is the leading manufacturer of graphics solutions for professionals and has been delivering high-quality, innovative 2D/3D and video graphics accelerators for more than 30 years. Creator of the multi-display phenomenon, Matrox combines its proven graphics chip designs, reliable software development and dependable card manufacturing expertise to produce products that are reputed worldwide for their superior image quality, practical ingenuity and unwavering stability. Matrox Graphics designs and supports graphics solutions optimized for utility, empowering professionals to see more and do more. A privately held company headquartered in Montreal, Canada, Matrox has international offices in the United States, the United Kingdom, Ireland, Germany, Italy and Hong Kong.
